UNDERGROUND AND SURFACE EXPLOITATION AND  
EXPLORATION OF MINERAL RESOURCES**

**PODEKS-POVEKS 2016**

**(SECOND ANNOUNCEMENT)**

**CALL FOR REGISTRATION AND SCIENCE PAPERS**

**11 ÷ 13 November 2016  
Hotel "Sirius" – Strumica**

## **Dear friends**

We are pleased to invite you to take participation, from 11<sup>th</sup> to 13<sup>th</sup> of November 2016, to the ninth expert consultation in the field of underground and surface exploitation and exploration of mineral resources (PODEKS - POVEKS "16).

Taking into account the activities in the field of mining and geology in our country and the region, in the period after the completion of the eighth professional counseling event in the field of underground and surface exploitation and exploration of mineral resources (PODEKS - POVEKS "15), we are hoping for another successful gathering where will be shared scientific and professional achievements.

## **OBJECTIVES OF THE CONFERENCE**

On the event will be presented new technical – technological achievements and actual production results in the underground and surface mining, will be made real review on the conditions in the underground mines for lead and zinc production and other mineral resources, will be made real review on the conditions in surface mining production of copper and other metallic and nonmetallic mineral resources, will be given basic directions and prospects for further development of technologies for underground and surface excavations of mineral resources as well as and all the new technical improvements in the field of exploration of mineral resources.

Maintaining such professional gatherings in the field of mining, is a transfer of knowledge and opportunity to exchange experiences gained in the process of underground and surface mining of mineral resources.

This conference gives opportunities for all participants, especially the operational mining engineers, experts and researchers in the form of science papers, discussions and experiences from practice, to contribute in solving the current problems in the underground and surface mines, as well as for further development of mining-geological activities in the Republic of Macedonia and the region.
